### Software architecture

La arquitectura de software define la estructura y organización fundamental de un sistema. También define la relación y comunicación entre los componentes del sistema de software. Es importante para tener las bases del sistema claras, y así facilitar el desarrollo y posterior mantenimiento de este.

La arquitectura de empresa, se encarga de la estrategia de una empresa a nivel global. Se preocupa por cómo las soluciones de una compañía interactúan entre ellas y cómo pueden mejorarse. Ambas se relacionan porque la arquitectura de software debe encajar con las necesidades a medio o largo plazo de la empresa, para optimizar recursos y alcanzar las prioridades de la compañía.
